### **Claim Rejections - 35 USC § 103**

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

If this application currently names joint inventors, in considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-2, 4-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over common knowledge in the art and US 3244922 (cited by the applicant).

Regarding claim 1 and 4, a photomultiplier comprising an outer vacuumed casing made of glass/silicon frame, a photocathode in the casing, an electron multiplier in the outer casing, and anode is known in the art. An electron multiplier having a base with plurality of wall portions that has one or more protrusions having a secondary electron emitting surface is not exemplified. However, in the same field of endeavor, US 3244922, discloses such an electron multiplier (see figure 1) having a base with plurality of wall portions that has one or more protrusions having a secondary electron emitting surface (see figure 1). Thus, it would have been obvious at the time the invention was made to a person having ordinary skill in the art to provide such protrusions of US 3244922 in the commonly known device for the purpose of multiplying and secondary emissions and thus obtaining enhanced image of display.

As per claims 2 and 4, protrusions of US 3244922 are alternatively positioned or in shifted positions on two walls along propagation direction of the electron.

### **Allowable Subject Matter**

Claim 3 is allowed. Claim 3 is allowable since prior art of record does not teach the photomultiplier meeting the claimed relationship  $B > A/2$  in combination with other features of claim.
